IMPORTANT INFORMATION

ELECTRICAL CONNECTIONS FOR CARAVANS

Caravans/vehicles connected to the Mystery Creek Events Centre power supply using a standard caravan plug will be connected via an RCD (Residual Current Device). This is a safety device which automatically switches off the circuit should it detect a fault.

New caravans, and caravans after approximately 1996, will have RCDs installed. In this case there is no problem to connect to the Mystery Creek power supply. NO action is required.

Older caravans may still have an 'earth neutral' link. Although caravans are still able to get an Electrical WOF in this configuration, caravan parks do not have to have RCDs for their power outlets. However showgrounds, including Mystery Creek Events Centre, MUST have RCDs for their power outlets.

As an RCD will see an 'earth neutral' link as a fault, caravans set up this way will not work at Mystery Creek Events Centre. Therefore any caravan with an 'earth neutral' link will have to have the link removed, for the duration of its connection to a Mystery Creek power supply.

THIS LINK MUST BE PUT BACK PRIOR TO CONNECTING TO ANY OTHER SUPPLY - the caravan is unsafe without an 'earth neutral' link when it is plugged into a non RCD supply.

Please bring this information to the attention of your electrician, the company you hire your caravan from, and for all guests bringing their own caravans onto our site. You will need to check the caravan and make the necessary changes (and document these changes in writing).

Mystery Creek Events Centre staff are unable to ask site electricians to make this modification as it is not guaranteed that the electrician will be able to return the wiring to its original configuration after the event.

Yours faithfully
